

DELIVERY PROFILES

PDF GUIDE

NOT FOR PUBLIC DISTRIBUTION
TIMETHENPRICE.COM

Hello there,
I hope that you are doing well.

This release of the 2025 Model Series is a bit different than the regular releases.

As you've already noticed this release is going to be in PDF format instead of lecture format.

The reason being is due to the topic which will be discussed throughout this PDF, Delivery Profiles.

Delivery Profiles are basically roadmaps for how each Time Cycle is going to deliver and therefore I want to provide you with a PDF which you can easily use to study price action.

Since the models which I am teaching you throughout this series are focused on intraday trading models, we will focus on session delivery profiles throughout this PDF.

For further reference on the application of Delivery Profiles across other Time Cycles, I suggest studying **the Predicting Price series on the 2024 Mentorship**.

The goal of this PDF is to guide you into having a roadmap for navigating Delivery Profiles and to train your eyes to recognize the influence of Time Cycles on the delivery of price.

I hope that you will enjoy reading this PDF.

Important Note

During this PDF I will introduce you to the topic of Delivery Profiles.

Delivery Profiles are frameworks through which Price can be understood through a Time perspective.

Throughout this PDF I will refer to concepts and terms which I have explained throughout prior lectures within the 2025 Model Series for my mentorship, TimeThenPrice.com.

If you did not study these lectures yet, I highly suggest you study them before continuing reading this PDF.

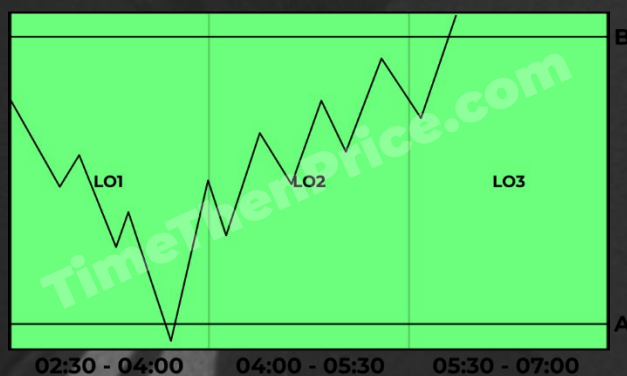

It's important to note that the Delivery Profiles as outlined in this PDF are frameworks through which I look at the markets from a Time & Price perspective. This means that the Delivery Profiles provide guidelines for interpreting price fluctuations. Focus on recognizing Purge & Reverts and you will see the magic of Time Cycles.

Enjoy.

London Profiles

London 1

The first London profile which we will look at is a profile which takes place in quick markets. The market is in a rush to get somewhere. The main characteristic of this Delivery Profile is that the London Session Opens Up at 02:30, immediately Manipulates Higher/Lower against the HTF Bias, reaches the Point Of Interest (A) and begins to show the signs of a Reversal taking place. Once this reversal is confirmed by CSD, it is anticipated that price will draw towards Draw On Liquidity (B) during LO2 and/or LO3. Our focus is on confirming the Manipulation during LO1 so we can anticipate distribution during LO3. Trade setups can be found either at the POI or later as the program has started. **Please note that all Times in all schematics are in New York Time.**

LO1 LOW OF LONDON

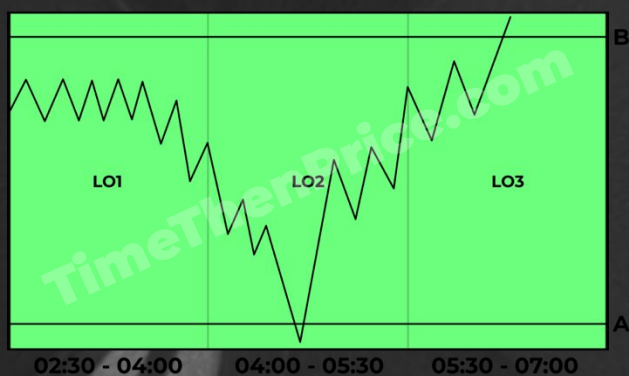

LO1 HIGH OF LONDON

London 2

The second London Profile which we are going to look at is the delivery profile of 'Classic' London Delivery. This is a delivery profile in which the Time Cycles deliver exactly as they're meant to deliver on a scheduled basis. Meaning, their Accumulation, Manipulation and Distribution function is occurring at the right times according to the Time Cycles Theory.

The most important characteristic of this delivery profile is that LO1 does not do a lot. It engineers liquidity in advance of the Point Of Interest for the day. Recognizing this is important because that way you can anticipate that throughout the second 90 minute cycle of the London Session price is likely going to manipulate above PCH or below PCL so that distribution can take place afterwards. Wait for the manipulation to be confirmed and the right side of the curve can be anticipated.

LO2 LOW OF LONDON

Zeussy published on TradingView.com, May 24, 2025 12:08 UTC-4

LO2 HIGH OF LONDON

Zeussy published on TradingView.com, May 24, 2025 12:13 UTC-4

London 3

The third London profile which we will look at is a delivery profile in which the beginning of the session seems to be trending, but throughout the third cycle a reversal unfolds. This Delivery Profile occurs when liquidity is being engineered throughout LO1 and LO2 which will be utilized to reprice against later throughout the session and/or day. A main characteristic of this framework is that LO1 begins of as a consolidation. LO2 then begins delivering into the direction of the Point Of Interest. LO3 will then Open, Manipulate into the POI followed by repricing into the anticipated direction of engineered liquidity throughout LO1 and LO2. Once these signs are confirmed, trade setups will either present themselves in the POI or along the expansion away from the POI.

LO3 LOW OF LONDON

LO3 HIGH OF LONDON

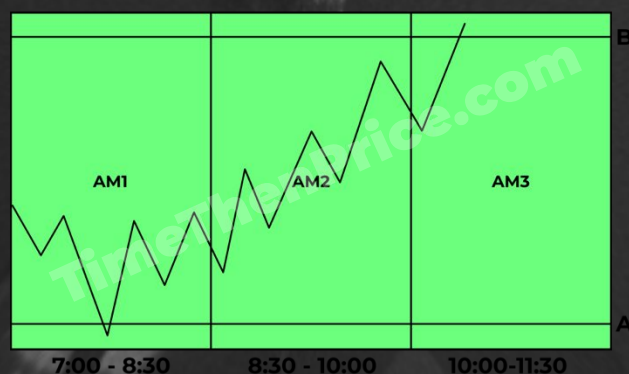

Morning Session Profiles

When it comes to the AM session, it's important to note that London sets the stage for how AM is likely going to deliver. Once we have defined what the London session has done, we are able to make an anticipation of what AM is likely going to do.

Morning 1

The first AM profile which we will look at takes place in markets that are quick. This profile takes place in markets that are either; Trending since LO or it can be a Reversal relative to LO's delivery. This delivery profile possesses the characteristics that the morning session Opens and immediately manipulates against the HTF Bias into the POI from which we will be monitoring the signs of a Reversal taking place. Once these signs are confirmed, trade setups will either present themselves in the POI or along the expansion away from the POI.

AM1 HIGH OF AM

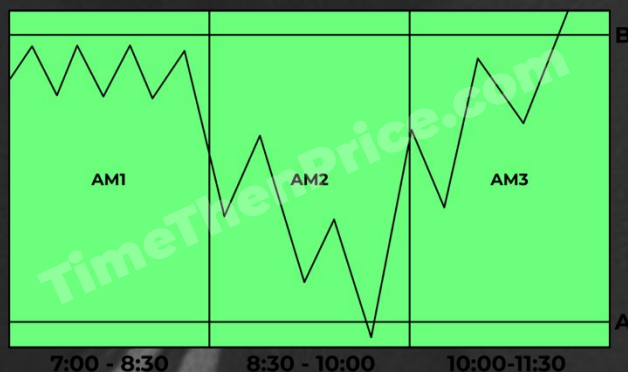

AM1 LOW OF AM

Morning 2

The **second morning profile** takes place when the Time Cycles their respective AMD functions deliver exactly as they should according to Time Cycles theory. This means that during cycle Accumulation takes place, during cycle 2 Manipulation and during cycle 3 Distribution. The focus throughout this delivery profile is to recognize cycle 1 is setting up the Manipulation so that when cycle 2 then in fact Manipulates, you're not caught off guard. Once this reversal is confirmed by CSD, it is anticipated that price will draw towards Draw On Liquidity (B) during AM2 and/or AM3.

The easiest way to spot this delivery profile is by focusing on recognizing Consolidation throughout AM1 in advance of our Point Of Interest.

AM2 HIGH OF AM

AM2 LOW OF AM

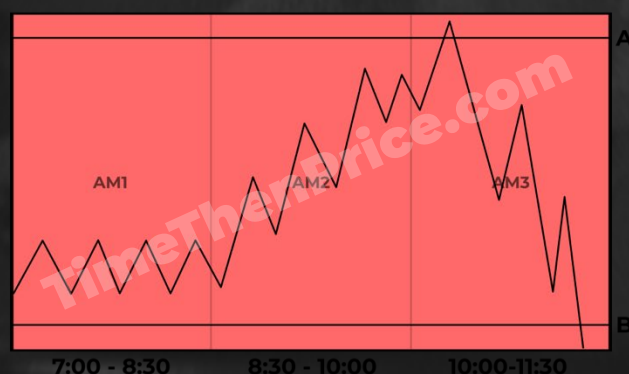

Morning 3

Throughout the **third AM profile** it seems as if the session begins Trending, but eventually ends with a Reversal.

The function of this 'trend' throughout AM1 and AM2 is to Engineer Liquidity by Trapping Retail into believing a specific Narrative whilst price is being repriced into the POI from which a Reversal is going to originate. The Reversal which takes place is usually rather quick due to the slowness of the Left Side Of The Curve.

Tip: Do not be scared as price is trending against the HTF Bias since you know it's Engineering Liquidity throughout the Manipulation into your Point Of Interest from which you can anticipate a Reversal taking place.

AM3 HIGH OF AM

Zeussy published on TradingView.com, May 25, 2025 00:58 UTC-4

AM3 LOW OF AM

Zeussy published on TradingView.com, May 25, 2025 00:56 UTC-4

Afternoon Session Profiles

Afternoon 1

The first PM profile which we will take a look at is the trending PM session profile. This profile takes place in markets that are either; Trending since AM or it can be a Reversal relative to AM's delivery. The main focus of this profile is on recognizing what the Lunch cycle (PM1) is doing. If PM1 manipulates into our POI and shows the signs of forming a reversal we can anticipate that the Right Side Of The Curve is likely going to unfold next throughout the remainder of the session.

In the case of a Reversal relative to AM's delivery, Draws On Liquidity are Liquidity Pools engineered throughout AM.

PM1 HIGH OF PM

PM1 LOW OF PM

Afternoon 2

The second PM profile takes place when the Time Cycles and their respective AMD functions deliver exactly as they should according to Time Cycles theory. This means that the first cycle Accumulates, second Manipulates, Third Distributes.

The focus throughout this delivery profile is to recognize cycle 1 is setting up the Manipulation so that when cycle 2 then in fact Manipulates, you're not caught off guard.

Once the SMR inside of our POI is confirmed, we can anticipate that trade setups will present themselves throughout the end of cycle 2 heading into cycle 3. This framework is referred to as the **Lunch Cycle Purge & Revert**. It's one of my favorite trading frameworks. The easiest way to spot this delivery profile is by focusing on recognizing Consolidation throughout the Lunch Cycle. in advance of our Point Of Interest.

PM2 HIGH OF PM

PM2 LOW OF PM

Afternoon 3

Throughout the third PM profile it seems as if the session begins Trending, but eventually ends with a Reversal.

The function of this trend throughout PM1 & PM2 is to engineer liquidity which will be targeted throughout PM3. When PM1 & PM2 Manipulate into your POI anticipate a Reversal taking place from here.

The Reversal which takes place is usually rather quick due to the slowness of the Left Side Of The Curve.

Tip: Do not be scared as price is trending against the HTF Bias since you know it's Engineering Liquidity throughout the Manipulation into your Point Of Interest from which you can anticipate a Reversal taking place.

PM3 HIGH OF PM

PM3 LOW OF PM

Conclusion

Thank you for reading this PDF all the way to the end.

I hope that you were able to gain major insights from it.

I would like to end this PDF by writing the following, Delivery Profiles are not patterns in price and they shouldn't be treated as such.

Delivery Profiles need to be treated as roadmaps which guide you into navigating the markets through a Time & Price perspective.

Wait for it to be confirmed what Delivery Profile is in play and that's where you will see the beauty of Algorithmic Price Delivery based upon Time & Price cycles.

I want to wish you good-luck in your studies.

Kindest regards,
Zeussy
